Raji – I am having a conference call with Bayer today to discuss the WRN. I will keep you posted on the status and give you as much notice as possible.

Matt

Just touching base to see when EPA should expect to see the WRN and when you all expect to sample. With the holidays coming up would like to make sure our contractors have enough personnel and ample time to mobilize if you all plan to sample by end of the year. Please let me know. Thanks!

Thanks Matt for the update and including the map. This definitely gives me an idea of what is left and answers my question. I received the bi-monthly report and am yet to review it.

Yes will discuss the WRN once we receive it. Thanks.

Raji – a few months ago when it was clear that the completion of the removal actions would be delayed by several months, we decided to go ahead with the sampling around the equipment and tank farm. By moving a few locations we were able to access all but one planned soil sample location. Those samples were collected during Mobilization 3 (August 29-31). The data from those samples has been validated and is in the database recently sent to you with the bi-monthly report. The base map that was attached to the bi-monthly report also shows the samples that have been collected (attached again here).

We are currently developing a WRN that will propose additional data collection on-property. That will be submitted to EPA within the next couple of weeks. Assuming EPA acceptance of the WRN, we would then go collect the additional data shortly thereafter. After those data are validated, we propose a meeting with EPA to discuss all of the data that has been collected and decide on the following two items: 1) any revisions to the proposed RI/FS Work Plan locations for on-property groundwater monitoring wells based on the data collected; and 2) any revisions to the off-property soil sampling locations that were proposed in the RI/FS Work Plan.

Please contact me with any questions.

Regards,
Matt

Matt

I heard from Adam that the as of now the removal work for equipment and AST removal will take until January. Just wanted to touch base to see if you have an estimated time frame for taking the rest of the samples in the equipment area along the fence line and the AST area.
